

**Non-Entropic Meta-Narratives :**  
**The Role of Electricity in the Morphology of the Universe**

a talk by Paul Malone

Ever been baffled by contemporary astronomy with its black holes, dark matter and endless explosions? Include electricity as a morphological agent and the objects we observe in space become explicable in terms of everyday experience - the laboratory, industrial processes and, indeed the domestic kitchen.

As part of his series of talks 'Non-Entropic Meta-Narratives' participating artist Paul Malone presents an overview of the current developments in Electric Universe theory. The talk will be followed by the closing Finissage of the 'Perpetuum Mobile' exhibition. Refreshments provided.

At the APT Gallery, 6 Creekside, London SE8  
Saturday 24th May 2008. 5.15pm to 6pm  
Followed by the Finissage of the Exhibition to 7pm
